

# We are experts in migrating your applications to the Cloud and helping you realize all the benefits of Cloud Computing.

## Specialized Skill-Set

### SERVICES

- Migration discovery and planning
- App development to aid migration
- Automation and Management
- High Perf and High Traffic Systems
- Scaling and Capacity Planning
- High Availability Engineering
- Scalability and HA Analysis
- Hosting architecture design

### PUBLIC CLOUDS

- Amazon
- Rackspace
- Terremark and others

### PRIVATE CLOUDS

- Cloud.com
- CloudStack
- Eucalyptus
- Openstack

### APPLICATIONS & FRAMEWORKS

- PHP
- Java
- Ruby
- .NET
- Perl
- Python

YOUR APPLICATION DEVELOPMENT PARTNER

Companies are looking to migrate applications running on traditional dedicated hosting providers to the Cloud. Cloud Computing enables virtually unlimited computing and storage resources to be allocated on demand and allows to pay as you go. This transition from CAPEX and OPEX as well as the agility gained by the ability to swiftly provision and decommission resources has made Cloud Computing very attractive.

Running Web Applications on traditional physical hardware in a datacenter is very different from running applications in the Cloud. Most often, application and hosting architecture changes are required to take full advantage of Cloud Computing and make your application scalable and highly available. ClearScale engineers, architects and developers are very experienced in designing the Cloud hosting architecture, preparing the application and performing the actual migration. We've worked with companies in different verticals (Social, Gaming, Media, Entertainment, E-commerce, Corporate and Non-Profit) and have helped them take advantage of Cloud Computing technologies to benefit their businesses.

## Staff

ClearScale employs an experienced team of Integration Engineers, Architects, and Application Developers who have a proven track record of building complex Cloud hosting systems and deploying applications for clients in a variety of verticals.

## Methodology

The ClearScale team is skilled in architecting and deploying Cloud hosting systems that can sustain very high web traffic and millions of users with 99.99% uptime or higher. Our unique set of skills and effective methodology ensures the highest availability and scalability of your web applications.

## Technology

Whether it's a basic company blog, architectural design of a hosting system for a social application with 5 million users or deployment and support of a highly-available and scalable file sharing application, the ClearScale team always utilizes the latest technology to achieve the highest level of performance, availability and security. Furthermore, we are well versed in a variety of frameworks and programming languages (PHP, .NET, Java, Ruby and others), which enables us to design hosting architectures in an application centric manner.
