

Your Internal IT in the Cloud?!

Problem

You have tons of hardware that is growing obsolete in your server room and your support and licenses need to be renewed again. Stop before you go with another huge round of capital expenditures and hire more people to support the ever changing technology.

The move to the Cloud is a transition that is looming in almost every company and is in the mind of every CTO. This path is no longer a mystery. Cloud Computing is here to stay and most of your internal IT infrastructure could be moved to the Cloud with no risk.

Solution

ClearScale has worked with many companies to implement and/or migrate the necessary tools, software, and services, to the Cloud. We help you build a more stable, scalable and manageable IT infrastructure for your company, while cutting capital and operational costs.

Every IT environment is made up of basic components like Email, Issue Tracking, Authentication, Document stores and more. ClearScale has implemented these components countless times in the Cloud and has the resources and technology to architect and deploy Cloud IT environments quickly and efficiently.

Our Services

- Implementation of IT in the Cloud
- Infrastructure Migration
- Software Deployment
- Cloud to Office Network Connectivity
- High Availability
- Scalability
- Cloud Computing Integration
- Automation
- Disaster Recovery and Backups
- Cloud Security

How can the Cloud help?

Cloud Computing makes it easier to architect, deploy and manage tools, software, and services. What makes it attractive is the pay-as-you-go model that eliminates capital costs like licenses and hardware. Cloud based solutions are also easier and faster to implement, maintain and require less personnel to support. Cloud is about leaner and more agile IT!

Common Systems and Tools We Implement

Mail Systems

- MS Exchange
- Web Based Email
- Custom Mail Solutions

Issue & Bug Tracking

- Jira
- Bugzilla
- Trac

Central Authentication

- MS Active Directory
- Open LDAP
- SSO

Doc Storage & Sharing

- MS SharePoint
- Cloud Storage
- Intranet

Collaboration Tools

- Confluence
- Jive
- MediaWiki

Project Mgmt Tools

- GreenHopper
- Trac
- Redmine

Source Control

- SVN
- GIT
- CVS

Dev Environments & Servers

- Linux
- Windows

Continuous Integration

- Jenkins
- Hudson
- Bamboo

Automated Testing

- Selenium
- Soasta
- Apica
- JMeter

Monitoring & Alerting

- Munin
- Big Brother
- Cacti
- Nagios

Hosting

- Amazon
- Rackspace
- Dedicated Hosting
- Cloud Hosting
