

We are experts in building Private Clouds and helping you leverage Cloud technology while utilizing your existing hardware.

You realize that running your applications in the Public Cloud has great scalability, availability and cost benefits, but you have already made a large investment in hardware. We can help you leverage your existing hardware to build a Private Cloud while using Public Cloud for bursting. Additionally, having a central location to manage both Clouds gives you even more benefits.

ClearScale delivers best of breed services in Cloud Computing integration, systems engineering, management, and application development. We've worked with companies to help them build Private Clouds using their own hardware and facilities. This approach has cost advantages at large scale and it gives great agility and simplifies management of computing resources. Furthermore combining Public and Private Clouds enables even further flexibility and cost benefit as it allows bursting to Public Cloud on demand. We are able to build Private Clouds using modern hardware and virtualization technologies.

Staff

ClearScale employs an experienced team of Integration Engineers, Architects, and Application Developers who have a proven track record of building complex Cloud hosting systems and deploying applications for clients in a variety of verticals.

Methodology

The ClearScale team is skilled in architecting and deploying Cloud hosting systems that can sustain very high web traffic and millions of users with 99.99% uptime or higher. Our unique set of skills and effective methodology ensures the highest availability and scalability of your web applications.

Technology

Whether it's a basic company blog, architectural design of a hosting system for a social application with 5 million users or deployment and support of a highly-available and scalable file sharing application, the ClearScale team always utilizes the latest technology to achieve the highest level of performance, availability and security. Furthermore, we are well versed in a variety of frameworks and programming languages (PHP, .NET, Java, Ruby and others), which enables us to design hosting architectures in an application centric manner.

Specialized Skill-Set

SERVICES

- High Availability Engineering
- Scaling and Capacity Planning
- Automation and Management
- Public, Hybrid and Private Clouds
- High Perf and High Traffic Systems
- Application Migrations
- Scalability and HA Analysis
- Application Development

PUBLIC CLOUDS

- Cloud.com
- CloudStack
- Eucalyptus
- Openstack

VIRTUALIZATION SUPPORT

- KVM
- Xen
- Hyper-V
- VMware

CLOUD MANAGEMENT

- RightScale
- Enstratus
- Scalr
- Puppet
- Chef
